The G9SA Series Offers a Complete Line-up of Compact Units.

- Four kinds of 45-mm wide Units are available:
  A 3-pole model, a 5-pole model, and models with 3 poles and 2 OFF-delay poles, as well as a Two-hand Controller. Also available are 17.5-mm wide Expansion Units with 3 poles and 3 OFF-delay poles.
- Simple expansion connection.
- OFF-delay models have 15-step OFF-delay settings.
- Conforms to EN ISO13849-1 (PLe/Safety Category 4) *
- Both DIN track mounting and screw mounting are possible.

*Except for some models.
Refer to “Applicable Performance Level (PL)” on page 13, or “Reliability data for safety of control components, SISTEMA library” on OMRON’s website.

Be sure to read the “Safety Precautions” on page 15

*1. The contact resistance was measured with 1 A at 5 VDC using the voltage-drop method.

*2. Not including bounce time.

*3. The response time is the time it takes for the main contact to open after the input is turned OFF. Includes bounce time.

*4. The insulation resistance was measured with 500 VDC at the same places that the dielectric strength was checked.

*5. The durability is for an ambient temperature of 15 to 35°C and an ambient humidity of 25% to 75%.

*6. Weight shown is for 24-VAC/VDC type. For 100 to 240-VAC type, add approximately 20 g.
Connections

Internal Connections

G9SA-301 (24 VAC/VDC)

G9SA-301 (100 to 240 VAC)

G9SA-501 (24 VAC/VDC)

G9SA-501 (100 to 240 VAC)

G9SA-321-T (24 VAC/VDC)

G9SA-321-T (100 to 240 VAC)

G9SA-TH301 (24 VAC/VDC)

G9SA-TH301 (100 to 240 VAC)

G9SA-EX301

G9SA-EX031-T

Note: 1. With 100 to 240-VAC type, be sure to connect PE to a protective ground. With 24-VAC/VDC type, if the power supply is not connected to a protective ground, be sure to connect PE to a protective ground.
2. With 24-VAC/VDC type, the power supply terminals A1 and A2 have polarities. A2 is the negative pole.
*1. Use terminals A and B to switch reset mode.
   A to B open: Manual reset
   A to B closed: Auto-reset
*2. Terminal T23 is used for 2-channel input with a positive common (when connecting a safety sensor with a PNP output).
   When using T23, make sure that T21 and T22 are open.
   For 1-channel input, make sure that T12 and T23 are shorted.
*3. Terminals 43-44 and terminals 53-54 are OFF-delayed outputs.

<td></td>
<td></td>
</tr>
</tbody>
</table>

Note: The above PL is only the evaluation result of the example. The PL must be evaluated in an actual application by the customer after confirming the usage conditions.

● Application Overview
- Stop signal input is sent to output a stop command to the motor controller to decelerate the motor M.
- The power supply to the motor M is turned OFF after OFF-delay time.
- After the release of the guard is permitted by the lock release permission signal turned ON, the guard is open by the operation of the lock release switch S4.
- Power supply to the motor M is kept OFF until the closing of the guard is confirmed by the limit switch S1 and guard lock safety-door switch S2, and the reset switch S3 is pressed.

Timing Chart

Note: The lock release enable signal must be configured so that it should turn ON after dangerous movement is stopped and safety is ensured for the door to open.

● Application Overview

- The motor M is turned ON when the two-hand pushbutton switch S11 and S12 are pressed simultaneously.
- The motor M is turned OFF when one of the two-hand pushbutton switches is released.

Timing Chart

Input time difference operates only when the difference is 0.5 s max.

S11, S12: Two-hand pushbutton switches
KM1 and KM2: Magnetic contactor

Note: For S11 and S12, use a 1NO/1NC switch.
Safety Precautions

Be sure to read the Common Precautions for Safety Warning at the following URL: http://www.ia.omron.com/.

**Meanings of Signal Words**

<table>
<thead>
<tr>
<th>Signal Word</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>! WARNING</td>
<td>Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally there may be significant property damage.</td>
</tr>
<tr>
<td>Precautions for Safe Use</td>
<td>Supplementary comments on what to do or avoid doing, to use the product safely.</td>
</tr>
<tr>
<td>Precautions for Correct Use</td>
<td>Supplementary comments on what to do or avoid doing, to prevent failure to operate, malfunction, or undesirable effects on product performance.</td>
</tr>
</tbody>
</table>

**Meaning of Alert Symbols**

- [ ] Indicates prohibited actions
- [ ] Indicates mandatory actions

**WARNING**

Serious injury may possibly occur due to breakdown of safety outputs. Do not connect loads beyond the rated value to the safety outputs.

Serious injury may possibly occur due to loss of required safety functions. Wire G9SA properly so that supply voltages or voltages for loads do NOT touch the safety inputs accidentally or unintentionally.

**Precautions for Safe Use**

1. When ready for wiring, the power source should be disconnected first. Further, at operating this unit, the terminal cover should be closed correctly in order to prevent an electrical shock.
2. Do not wire in case threat of Lightning, otherwise an electric shock may occur.
3. Do not apply any excessive voltage or current to the input or output circuit the G9SA. Doing so may result in damage to the G9SA or cause a fire.
4. Do not apply any variable voltage, otherwise G9SA may malfunction.
5. Do not connect any overload to the output circuit, otherwise the G9SA in operation will generate excessive heat and the output elements of the G9SA may short-circuit or fire may result.
6. The lifetime of G9SA depends on the conditions of switching of its outputs. Be sure to conduct its test operation under actual operating conditions in advance and use it within appropriate switching cycles. Change the G9SA before expected operation. Over operation may cause may short-circuit or may malfunction.
7. Do not operate the G9SA with flammable or explosive gas. An arc with operation and the heat of relay will cause a fire or an explosion.
8. Do not disassemble, repair, or modify the G9SA, otherwise an electric shock may occur or the G9SA may malfunction.
9. Use protective device (Fuse of 5 A current rating etc) for short-circuit protection and ground fault protection, otherwise a fire may occur or the G9SA may malfunction.

**Precautions for Correct Use**

1. For malfunctions in case that the power supply picks up gradually. Malfunctions in case that the power supply picks up gradually. In case that the input circuits close before the power supplies, internal logic may malfunction.
2. Handling
   1. Do not drop the G9SA or shock or vibrate the G9SA excessively. Doing so may result in damage to the G9SA or cause G9SA to malfunction.
   2. Do not turn the off-delay setting volume switch of G9SA-321- T less than the MIN value or more than the MAX value. Otherwise the G9SA may be failed.
3. For adhesion of solvent
   Adhesion of solvent, likely Alcohol, Thinner, Trichloroethane, Gasoline, on the product should be prohibited. Such solvent cause erasing the marking and being inferior of the parts.
4. Operating and Storage Environment
   Do not operate or store the G9SA under the following conditions.
   Doing so may result in damage to the G9SA or cause the G9SA to malfunction.
   1. The places with direct sunlight.
   2. The places with ambient temperature ranges not within -25 to 55°C.
   3. The places with rapid temperature changes resulting in condensation or relative humidity ranges not within 35 to 85% RH.
   4. The places with atmospheric pressure out of the range 86 to 106 kpa.
   5. The places with corrosive or inflammable gas.
   6. The places with water, oil, or chemical sprayed on the G9SA.
   7. The places with vibration or shock affecting the G9SA.
   8. The places with atmosphere containing dusts, saline or metal powder.
5. Mounting multiple units
   When mounting multiple units close to each other, the rated current will be 3 A. Do not apply a current higher than 3 A.
6. For feedback purpose use devices with contacts capable of switching micro loads of 24 VDC, 5 mA.
7. The Safety input OFF signal for T11/T12 (or T21/T22) and T21/T22 terminals must be longer than the response time (10 ms).
   Otherwise, the G9SA will be locked out or will not be able to be started or restarted. Also, a shorter safety input OFF signal might cause the G9SA to be locked. In this case, all safety inputs must be turned off or the power supply for G9SA must be off before restarting the G9SA.
8. Wiring
   1. Use the following to wire the G9SA.
      - Stranded wire (Flexible wire): 0.75 to 1.5 mm²
      - Solid wire: 1.0 to 1.5 mm²
      - Maximum Stripping length: 7 to 8mm
   2. The G9SA may malfunction or generate heat.
      - Tighten each screw to a torque of 0.78 to 1.18 N·m
   3. External inputs connected to T11 and T12 or T21 and T22 of the G9SA must be no-voltage contact inputs.
   4. PE is a ground terminal. When machine is grounded at the positive, the PE terminal should not be grounded.
9. This is a class A product. In residential areas it may cause radio interference, in which case the user may be required to take adequate measures to reduce interference.
10. Mounting Expansion units
    When an Expansion Unit is being used, remove the connector from the G9SA Master Units and insert the connector of the Expansion Unit's connector cable. Make sure that the connector is correctly locked before operating.
**Connector Cover**
Do not remove the connector cover of the G9SA-301, G9SA-501, G9SA-321-T@, or G9SA-TH301 unless an Expansion Unit is being used.

**Connecting Inputs**
If using multiple G9SA models, inputs cannot be made using the same switch. This is also true for other input terminals.

**Ground Shorts**
The G9SA internal circuits have a positive thermistor (TH) built in, which will detect ground short malfunctions (where S1 and S2 are grounded) and 1-channel and 2-channel short malfunctions, and cut off the safety output. If the short breakdown is repaired, the G9SA automatically recovers.

---

**Resetting Inputs**
When only channel 1 of the 2-channel input turns OFF, the safety output is interrupted. In order to restart when this happens, it is necessary to turn OFF and ON both input channels. It is not possible to restart by resetting only channel 1.

**Resetting Inputs During OFF Delay Time**
The G9SA-321-T@ operates as follows according to the reset mode when the inputs are to be re-entered during the OFF delay time of the G9SA-321-T@:

- For auto reset, after the OFF delay time has ended, the outputs will turn OFF, and then the outputs will turn ON again.
- For manual reset, after the OFF delay time has ended, the outputs will turn OFF, and then the outputs will turn ON again when the reset is input.

**Durability of Contact Outputs**
Relay with Forcibly Guided Contact durability depends greatly on the switching condition. Confirm the actual conditions of operation in which the Relay will be used in order to make sure the permissible number of switching operations. When the accumulated number of operation exceeds its permissible range, it can cause failure of reset of safety control circuit. In such case, please replace the Relay immediately. If the Relay is used continuously without replacing, then it can lead to loss of safety function.

---

**Applicable Performance Level (PL)**
(EN ISO13849-1)
G9SA Safety Relay Units can be applied to PLe/Safety Category 4. (The OFF-delay output section of G9SA-321-T@/EX031-T@ is applied to PLd/Safety Category 3.)
The above is provided according to circuit examples presented by OMRON. Therefore, the above may not apply to all operating environments.
The applicable safety category is determined from the whole safety control system. Make sure that the whole safety control system meets ISO 13849-1 requirements.

**Certified Standards**
The G9SA-301/501/321-T@/TH301/EX301/EX031-T@ conform to the following standards.
- EN standards, certified by DGUV:
  - EN60947-5-1
  - EN ISO13849-1: 2008
  - EN ISO13849-2
  - GS-ET-20
  - EN574 (G9SA-TH301 only)
- UL standards: UL508 (Industrial Control Equipment)
- CSA standards: CSA C22.2 No. 14 (Industrial Control Equipment)
- CCC Certification: GB/T 14048.5
## Terms and Conditions Agreement

Read and understand this catalog. Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

### Warranties

(a) Exclusive Warranty. Omron’s exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron’s sole obligation hereunder shall be, at Omron’s election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron’s analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

### Limitation on Liability: Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY. Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

### Suitability of Use

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer’s application or use of the Product. At Buyer’s request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer’s application, product or system. Buyer shall take application responsibility in all cases. NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

### Programmable Products

Omron Companies shall not be responsible for the user’s programming of a programmable Product, or any consequence thereof.

### Performance Data

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron’s test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron’s Warranty and Limitations of Liability.

### Change in Specifications

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron’s representative at any time to confirm actual specifications of purchased Product.

### Errors and Omissions

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
