Switch Mode Power Supply
S8TS

Block-type Switch Mode Power Supply That Mounts to DIN Rail

- One model covers 30 to 120 W (12-V models).
- One model covers 60 to 240 W (24-V models).
- Easy creation of multi-power supply configurations with different output power supplies connected together (5-V, 12-V, and 24-V models).
- Improve power supply system reliability by creating N+1 redundant systems (12-V and 24-V models).
- RoHS-compliant.
- Input conditions: 80 to 370 VDC supported for DC input too (EC Directives and safety standards are not applicable.)
- Operating temperatures to –20°C (24-V models).

Refer to Safety Precautions for All Power Supplies and Safety Precautions on page 12.

Model Number Structure

Model Number Legend

Note: Not all combinations are possible. Refer to List of Models in Ordering Information, below.

</tbody>
</table>

Note: 1. Do not use an inverter output for the Power Supply. Inverters with an output frequency of 50/60 Hz are available, but the rise in the internal temperature of the Power Supply may result in ignition or burning.

2. Refer to page 7 for details on adjusting the output voltage for parallel operation. If set to less than ~10%, the undervoltage detection function may operate. Ensure that the output capacity and output current after adjustment do not exceed the rated output capacity and rated output current respectively. Adjusting V.ADJ may cause the output voltage to exceed the voltage range. When adjusting the output voltage, confirm the actual output voltage from the Power Supply and be sure that the load is not damaged.

3. Class 2 approval does not apply to parallel operation.

4. The output current is specified at power output terminals.

5. Refer to the Engineering Data on page 8 for details.

6. To reset the protection, turn off the input power for one minute or longer and then turn it back again.

7. Be sure to mount End Plates (PPF-M) on both ends of the Power Supply.

8. The range for compliance with EC Directives and safety standards (UL, EN, etc.) is 100 to 240 VAC (85 to 264 VAC).

9. The noise level depends on the wiring method and other factors. Insert one clamp filter (the ZCAT2436-1330A from TDK) as a noise countermeasure on the input line and ground line combined.

Ratings/Characteristics

- Input Voltage (See note 1.) Ratings: 100 to 240 VAC (Allowable range: 85 to 264 VAC, 80 to 370 VDC (See note 8.))
- Efficiency (TYP.) 24-V models: 80% TYP.; 12-V models: 73% TYP. (with rated input, 100% load)
- Current 100 V input 24-V models: 1.0 A max. 12-V models: 0.7 A max. 24-V models: 0.8 A max. 12-V models: 0.4 A max. 24-V models: 0.5 A max. 12-V models: 0.4 A max. (No. of Blocks) max.
- Power factor 24-V models: 0.9 min.; 12-V models: 0.8 min. (with rated input, 100% load)
- Harmonic current emissions Conforms to EN61000-3-2
- Leakage current 100 V input 0.35 mA max. 0.35 mA x (No. of Blocks) max. 240 V input 0.7 mA max. 0.7 x (No. of Blocks) max.
- Irnush current 100 V input 17.5 A max. (for a cold start at 25°C) 17.5 A x (No. of Blocks) max. (for a cold start at 25°C)
- Load variation influence 0.5% max. (with rated input, 10% to 100% load) 3% max. (with rated input, 10% to 100% load)
- Temperature variation influence 0.05%/°C max. (with rated input and output)
- Startup time 1,000 ms max. (with 100/200 VAC, rated input)
- Hold time (See note 5.) 20 ms min. (with 100/200 VAC, rated input)
- Overload protection (See note 5.) 100% to 140% of rated load current, voltage drop, automatic reset
- Overvoltage protection (See notes 5 and 6.) Yes
- Parallel operation Yes (Up to 4 Blocks)
- N+1 redundant system Yes (Up to 5 Blocks)
- Series operation Yes
- Undervoltage indicator (See note 5.) Yes (color: red)
- Undervoltage detection output (See note 5.) Yes (open collector output), 30 VDC max., 50 mA max.
- Ambient operating temperature (See note 5.) Refer to the derating curve in Engineering Data (with no icing or condensation.)
- Storage temperature -25 to 65°C
- Ambient operating humidity 25% to 85% (Storage humidity: 25% to 90%)
- Dielectric strength 3.0 kVAC for 1 minute (between all inputs and all outputs; detection current: 20 mA)
- Insulation resistance 100 MΩ min. (between all outputs, and all inputs/PE terminal) at 500 VDC
- Vibration resistance (See note 7.) 10 to 55 Hz, 0.375-mm single amplitude for 2 h each in X, Y, and Z directions
- Shock resistance (See note 7.) 150 m/s², 3 times each in X, Y, and Z directions
- Output indicator Yes (color: green)
- Conducted Emission (See note 8.) Conforms to EN61000-3 Class B and based on FCC Class A (See note 9.)
- Radiated Emission Conforms to EN61000-3-3 Class B (See note 9.)
- EMS (See note 8.) Conforms to EN61204-3 High severity levels (See note 9.)
- Approved standards (See note 8.) 24V model UL Listed: UL508 (Listing, Class2 Output: Per UL1310) (See note 3.) cUL Listed: CSA C22.2 No.107.1 (Class2 Output: Per CSA C22.2 No.223) (See note 3.) EN: EN62477-1 12V model UL Listed: UL508 (Listing) cUL Listed: CSA C22.2 No.107.1 EN: EN62477-1
- Weight 450 g max. 450 g x (No. of Blocks) max.

</tbody>
</table>

**Note:**
1. Do not use an inverter output for the Power Supply. Inverters with an output frequency of 50/60 Hz are available, but the rise in the internal temperature of the Power Supply may result in ignition or burning.
2. If set to less than −10%, the undervoltage detection function may operate. Ensure that the output capacity and output current after adjustment do not exceed the rated output capacity and rated output current respectively. If the output voltage adjuster (V. ADJ) is turned, the voltage will increase by more than 10% of the output voltage, confirm the actual output voltage from the Power Supply and be sure that the load is not damaged.
3. The output current is specified at power output terminals.
4. Refer to the Engineering Data on page 8 for details.
5. To reset the protection, turn OFF the input power for one minute or longer and then turn it back again.
6. Be sure to mount End Plates (PFP-M) on both ends of the Power Supply.
7. The range for compliance with EC Directives and safety standards (UL, EN, etc.) is 100 to 240 VAC (85 to 264 VAC).

### Reference Value

Construction and Nomenclature

**Nomenclature**

**Basic Blocks with Screw Terminals**

- **A** AC Input Terminal (L): Connect an input line to this terminal.
- **B** AC Input Terminal (N): Connect an input line to this terminal.
- **C** Protective Earth (PE) Terminal ( ): Connect a ground line to this terminal.
- **D** Output Indicator (DC ON: Green): Lights while DC output is ON.
- **E** Undervoltage Indicator (DC LOW: Red): Lights when the voltage at the output terminal drops.
- **F** Output Voltage Adjuster (V.ADJ): Use to adjust the output voltage.
- **G** Undervoltage Detection Output (DC LOW OUT): Open Collector output
- **H** DC Output Terminal (–V): Connect load lines to this terminal.
- **I** DC Output Terminal (+V): Connect load lines to this terminal.
- **J** Slider: Slide to the lock side when connecting. Unlock the slider when disconnecting.

**Basic Blocks with Connector Terminals**

- **1** AC Input Terminal (L)
- **2** AC Input Terminal (N)
- **3** Protective Earth (PE) Terminal ( )
- **4** Parallel Operation Signal Terminal
- **5** Output Indicator (DC ON: Green)
- **6** Undervoltage Indicator (DC LOW: Red)
- **7** Output Voltage Adjuster (V.ADJ)
- **8** Undervoltage Detection Output (DC LOW OUT)
- **9** DC Output Terminal (–V)
- **10** DC Output Terminal (+V)
- **11** Slider
- **12** Connection Status Indicator

**Connector with DC Line Connected**

- **S8T-BUS01 Bus Line Connector**

**Connector with DC Line Not Connected**

- **S8T-BUS02 Bus Line Connector**
Operation

Applications Methods

N+1 Redundant Systems

To ensure stable operation when there is a failure in one of the Blocks, use within the derating curve for N+1 redundant systems.

Multi-output Power Supply

Up to 4 Basic Blocks with different output voltage specifications can be linked.

Selecting Bus Line Connectors

Select Bus Line Connectors according to the linking method as follows:

Using Parallel Operation

Use the S8T-BUS01 (DC line connected). (See Figure 1.)

The S8T-BUS01 Bus Line Connector is equipped with a selector to prevent erroneous connection of Blocks with different output voltage specifications. Slide the selector to the output voltage for parallel operation.

Note: Parallel operation is enabled by using a current balance function. For the current balance function to operate, the S8T-BUS01 must be used.

Not Using Parallel Operation

Use the S8T-BUS02 (DC line not connected). (See Figure 2.)

Figure 1: DC line connected (parallel connection)

Figure 2: DC line not connected (isolated connection)
Mounting and Removing Bus Line Connectors

Pay attention to the following points to maintain electrical characteristics.
Do not insert/remove the Connectors more than 20 times.
Do not touch the Connector terminals.
To remove the Connectors, insert a flat-bladed screwdriver alternately at both ends.

Wiring Linked Blocks

When linking Blocks together, wire input lines to one Basic Block only, otherwise inputs may be shorted internally resulting in damage to the Block.

Do not wire inputs to more than one Block.

Do not cross-wire Blocks or wire between a Block and another device. If the current exceeds the rated current, Bus Line Connectors may be damaged.

Series Operation and ± Output

Using 2 Basic Blocks enables series operation and the use of ± output. An external diode is not required for S8TS-06024@ and S8TS-03012@ models, but is required for S8TS-02505@ models. Use the following as a rough guide for selecting the diode.

<table>
<thead>
<tr>
<th>Type</th>
<th>Schottky barrier diode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Withstand voltage (V_{RRM})</td>
<td>At least twice the rated output voltage</td>
</tr>
<tr>
<td>Current with normal direction (I_{F})</td>
<td>At least twice the rated output current</td>
</tr>
</tbody>
</table>

Note: Series operation is possible with different specifications, but the current that flows to the load must not exceed the rated output current of any Block.

Adjusting Output Voltage for Parallel Operation

The Blocks are factory-set to the rated output voltage. When adjusting output voltages, set the same values for Blocks with output voltage adjuster (V.ADJ) before linking them together. Adjust the set values within the limits given in the following table.

<table>
<thead>
<tr>
<th>Model number</th>
<th>Difference between output voltages</th>
</tr>
</thead>
<tbody>
<tr>
<td>S8TS-03012@</td>
<td>0.12 V max.</td>
</tr>
<tr>
<td>S8TS-06024@</td>
<td>0.24 V max.</td>
</tr>
</tbody>
</table>

Do not adjust output voltages after Blocks are linked together. The output voltage may become unstable.

Inrush Current

The inrush current per Basic Block is 17.5 A max. at 100 VAC and 35 A max. at 200 VAC. When N Blocks are linked together, the inrush current will be equal to N times that for 1 Basic Block. Be sure to use a fuse with the appropriate fusing characteristics or a breaker with the appropriate tripping characteristics.

Leakage Current

The leakage current per Basic Block is 0.35 mA max. at 100 VAC and 0.7 mA max. at 240 VAC. When N Blocks are linked together, the leakage current will be equal to N times that for 1 Basic Block.

Mounting

Mounting Direction

Use standard mounting only. Using any other mounting method will prevent proper heat dissipation and may result in deterioration or damage of internal parts.
Engineering Data

Derating Curves

Parallel Operation and Side-by-side Mounting

Single Operation with Spaces between Blocks

N+1 Redundant System

Note: 1. If there is a derating problem, use forced air-cooling.
2. The ambient temperature is specified for a point 50 mm below the Power Supply.
3. Use the rated output for single operation multiplied by N as a reference for the load ratio for an N+1 redundant system.
4. DC Input: If the input voltage is less than 100 VDC, reduce the load to 0.8 or less times the values given in the above derating curves.
■ Overload Protection
The Power Supply is provided with an overload protection function that protects the Power Supply from possible damage by overcurrent. When the output current rises above 105% min. of the rated current (100% min. of the rated current for parallel operation), the protection function is triggered, automatically decreasing the output voltage. When the output current falls within the rated range, the overload protection function is automatically cleared.

The values shown in the above diagram are for reference only.

Note: Internal parts may occasionally deteriorate or damaged if a short-circuited or overcurrent continues for 20 min. or longer.

■ Overvoltage Protection
An overvoltage protection function is provided so that excessive voltage is not applied to the load, e.g., if the feedback circuit in the Power Supply fails. When a voltage that is approximately 120% of the rated voltage or more is output, the output voltage is shut OFF. Reset the input power by turning it OFF for at least 1 minute and then turning it back ON again.

12-V and 5-V Models

![Graph showing overvoltage protection](image)

24-V Models

![Graph showing overvoltage protection](image)

The values shown in the above diagrams are for reference only.

Note: Do not turn ON the input power again until the cause of the overvoltage has been removed.

■ Inrush Current, Startup Time, Hold Time

![Graph showing inrush current and hold time](image)

■ Undervoltage Indicator and Undervoltage Detection Output

When a drop in the output voltage is detected, the red indicator (DC LOW) lights and transistor (DC LOW: OUT) output turns ON to provide external notification of the error. The detection voltage is set to approximately 80% (75% to 90%) of the rated output voltage.

<table>
<thead>
<tr>
<th>Status of indicator</th>
<th>Voltage status</th>
<th>Output status (See note 2.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green lit: [ ] DC ON</td>
<td>Approx. 80% min. of the rated output voltage</td>
<td>ON</td>
</tr>
<tr>
<td>Red not lit: [ ] DC LOW</td>
<td>(See note 3.)</td>
<td>OFF</td>
</tr>
<tr>
<td>Green lit: [ ] DC ON</td>
<td>Approx. 80% max. of the rated output voltage</td>
<td>OFF</td>
</tr>
<tr>
<td>Red not lit: [ ] DC LOW</td>
<td>Close to 0 V</td>
<td>OFF</td>
</tr>
</tbody>
</table>

Note: 1. This function monitors the voltage at the power output terminals. For accurate confirmation of the output status, measure the voltage at the output terminal.
2. Transistor output: Open collector
   - 30 VDC max., 50 mA max.
   - ON residual voltage: 2 V max.
   - OFF leakage current: 0.1 mA max.
3. The indicators become dimmer as the output voltage approaches 0 V.

Dimensions

Note: All units are in millimeters unless otherwise indicated.

**S8TS**

DIN Rails (Order Separately)

Mounting Rails (Material: Aluminum)

- **PFP-100N**
- **PFP-50N**

End Plate

- **PFP-M**
Application Examples

**Standardization**
- Semiconductor manufacturing equipment
- Electrical appliance manufacturers

**Machines with various models or equipment with various power supply specifications**
- Automobile manufacturers

- Simplified designing and design changes.
- Reduced stock and reduced purchasing funds.

**Power Supplies with Multiple Outputs**
- Packing machines
- Conveyors

**Equipment and systems that use multiple power supplies or multiple power supply outputs**
- Large control panels

- Simplified creation of power supplies with multiple outputs.

**N+1 Redundant Systems**
- Semiconductor utilities
- Process equipment
- Process-control systems

**N+1 Redundancy**
In an N+1 redundant system, N Power Supplies of the same model are linked in parallel connections and one additional Power Supply of the same model is added for redundancy. (N is 1 for a single operation system.) This setup increases system reliability.

**S8TS Operation**
No special settings are required for N+1 redundant operation with the S8TS. Just link Basic Blocks for redundant operation in parallel to enable N+1 redundant operation. A current balance function is used for S8TS N+1 redundant operation so that each Block provides the same current. If one Power Supply fails, the remaining Power Supplies share the load of the failed Power Supply, and operation continues with each Power Supply providing more current.

The Power Supply that has failed can be identified by the output indicator, undervoltage indicator, and undervoltage detection output to enable replacing the Block with a normal Block. Always turn OFF the input power before replacing a Block. To increase Power Supply reliability, use only 90% or less of the maximum rated capacity for N Power Supplies even when N+1 Power Supplies are linked.
Safety Precautions

Refer to Safety Precautions for All Power Supplies.

CAUTION

- Do not disassemble the product or touch internal parts during power-on. Electric shock may be caused.
- Do not touch the product during power-on, and immediately after poweroff. Hot surface may cause heat injury.
- Electrical shock or minor injury may occasionally occur. Do not touch the terminals while power is being supplied. Also, always attach the Terminal Cover after you complete wiring. While power is supplied, voltages up to 370 V are generated internally. The voltage can remain for 30 seconds after the power supply is turned OFF.
- Do not remove any connector cover unless using bus line connectors. Electric shock may be caused.
- Tighten the terminal screws with torque: 9.6 in-lb (1.08N·m), and tighten the connector screw and screw flange with torque: 2.7 in-lb (0.3N·m). Loose screws may cause fire.
- Minor injury, fire, or device failure may occasionally occur. Do not allow any pieces of metal, conductors, or cuttings from installation work to enter the Power Supply.

Precautions for Safe Use

Mounting

Heat dissipation capacity may be decreased if a non-standard mounting method is used, occasionally resulting in damage to internal components. Use only the standard mounting method.

To improve the long-term reliability of devices, give due consideration to heat dissipation when mounting. With the S8TS, heat is dissipated by natural convection. Mount Blocks in a way that allows convection in the atmosphere around them.

Do not allow cuttings to enter the Power Supply during installation work.

Be sure to remove the sheet covering the Power Supply for machining before turning ON the power so that it does not interfere with heat dissipation.

Wiring

Ground the product completely. Failure to do so could cause the electric shock or malfunction.

Ensure that input and output terminals are wired correctly.

Use the following material to the wire to be applied to the product for preventing from the occurrence of the smoking or ignition caused by the abnormal load.

Recommended Wire Type:(For Single unit operation)

Do not apply more than 100-N force to the terminal block when tightening it.

Use the following material for the wires to be connected to the S8TS to prevent smoking or ignition caused by abnormal loads.

Recommended Wire Size for Single-unit Operation

Blocks with Connector Terminals

When using Blocks with connector terminals, the current for 1 terminal must not exceed 7.5 A. If a higher current is required, use 2 terminals.

Do not insert/remove AC input connectors or DC output connector more than 20 times.

Installation Environment

Do not use the Power Supply in locations subject to shocks or vibrations. In particular, install the Power Supply as far as possible from contactors or other devices that are a vibration source. Be sure to mount End Plates (PFP-M) on both ends of the Power Supply.

Install the Power Supply well away from any sources of strong, high-frequency noise and surge.
Ambient Operating and Storage Environments

Do not use or store the Power Supply in the following locations. Doing so may result in failure, malfunction, or deterioration of performance characteristics.

Do not use the Power Supply in locations subject to direct sunlight.

Do not use the Power Supply in locations where the ambient temperature exceeds the range of the derating curve.

Do not use the Power Supply in locations where the humidity is outside the range 25% to 85%, or locations subject to condensation due to sudden temperature changes.

Do not store the Power Supply in locations where the ambient temperature is outside the range –25 to 65°C or where the humidity is outside the range 25% to 95%.

Do not use the Power Supply in locations where liquids, foreign matter, corrosive gases, or corrosive gases may enter the interior of the Power Supply.

Short-circuits or overcurrent conditions that last for 20 seconds or longer may cause deterioration or damage to internal parts.

Output Voltage Adjuster (V.ADJ)

Do not exert excessive force on the output voltage adjuster (V.ADJ). Doing so may break the adjuster.

Setting the output voltage adjuster (V.ADJ) to 90% or less of the rated output voltage may cause the undervoltage detection function to operate.

Bus Line Connectors

Do not apply strong shocks (e.g., by dropping) to the Bus Line Connectors. Doing so may result in damage.

DIN Rail Mounting

To mount the Block on a DIN Rail, hook portion (A) of the Block onto the Rail and press the Block in direction (B).

To dismount the Block, pull down portion (C) with a flat-blade screwdriver and pull out the Block.

In Case There Is No Output Voltage

If there is no output voltage, it is possible that overload protection or overvoltage protection is operating. It is also possible that the latch protection circuit is operating due to the application of a large surge, such as lightning surge. Confirm the 2 points below. If there is still no output voltage, consult your OMRON representative.

- Checking for Overload Protection:
  Separate the load line and confirm that it is not in an overload state (including short-circuits).

- Checking for Overvoltage Protection or Latch Protection:
  Turn the input power OFF, and then turn it ON again after 1 minute or more has elapsed.

Buzzing Noise When the Input Is Turned ON

A harmonic current suppression circuit is built into the input power. This circuit can create noise when the input is turned ON, but it will last only until the internal operation stabilizes and does not indicate any problem in the Power Supply.

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.

In the interest of product improvement, specifications are subject to change without notice.
Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

(a) Exclusive Warranty. OMRON's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by OMRON (or such other period expressed in writing by OMRON). OMRON disclaims all other warranties, express or implied.

(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

OMRON further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. OMRON's sole obligation hereunder shall be, at OMRON's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall OMRON be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless OMRON's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by OMRON before shipment. OMRON Companies shall not be liable for the suitability or unsuitability of the products from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your OMRON representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of OMRON Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

OMRON Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

OMRON Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in OMRON Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the OMRON's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your OMRON's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by OMRON Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
