

# Premium detection stability and optimal usability for Laser Displacement Sensors

# For all engineers who don't have time for the hassle

We at OMRON believe that we are now at a time where laser displacement sensors should be selected for their usability.

Our new ZP-L Series products are equipped with a carefully designed user interface, as well as detection accuracy.

They're packed with creative features that allow engineers to cut back on time and effort unknowingly spent when working with displacement sensors.

## For inspection/detection of around 10 $\mu\text{m}$ to 1 mm

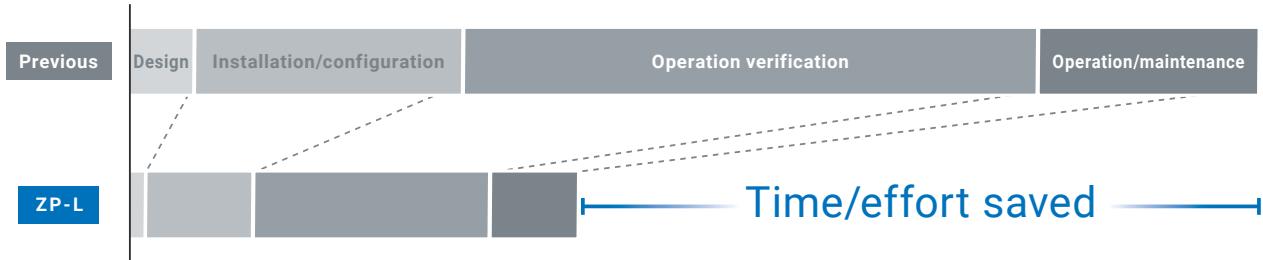

Detecting material remaining on roll

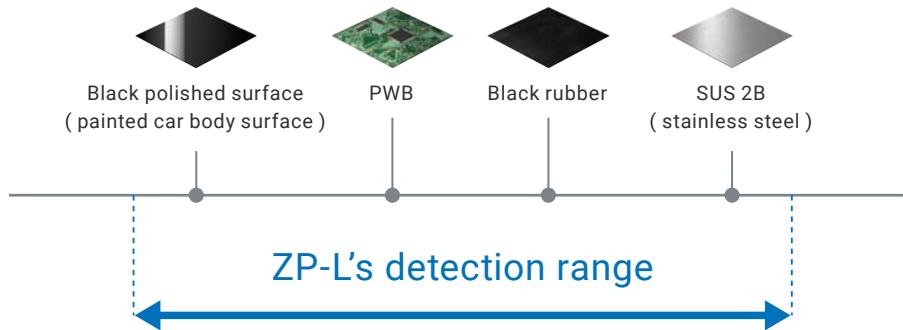

Checking for doubled-up boards

# Using displacement sensors is now easier with dramatically less effort

Sensing performance delivering stable detection with initial configuration left intact

User interface requiring no manuals for easy understanding

Support software allowing quick test without loggers

Support software Wave Inspire ZP

P.4

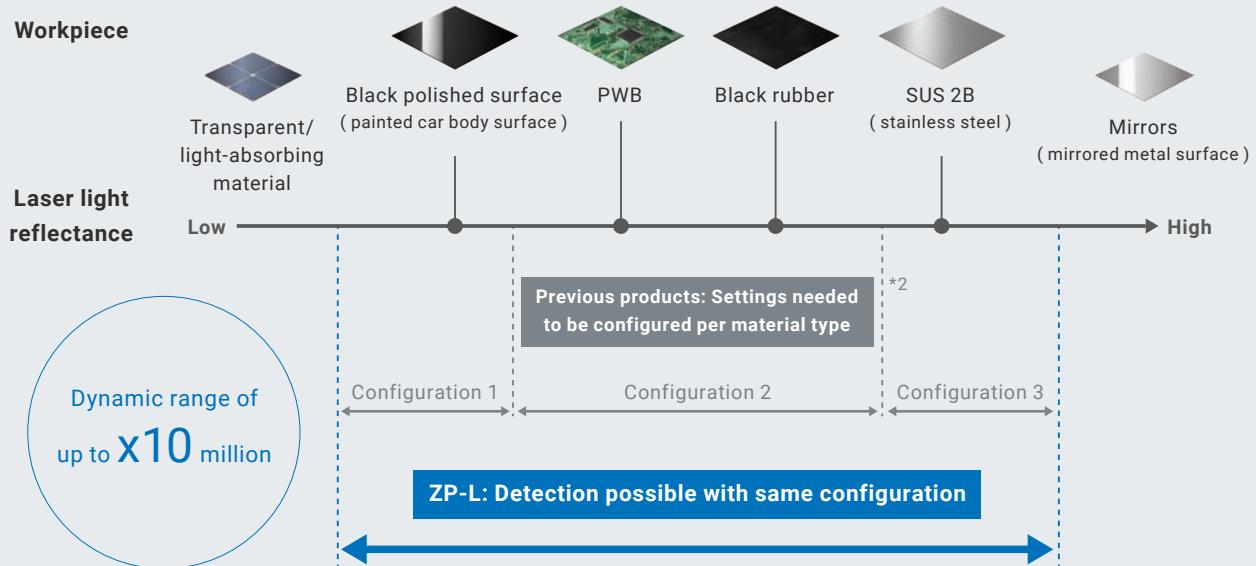

P.6

P.8

# Sensing performance delivering stable detection with initial configuration left intact

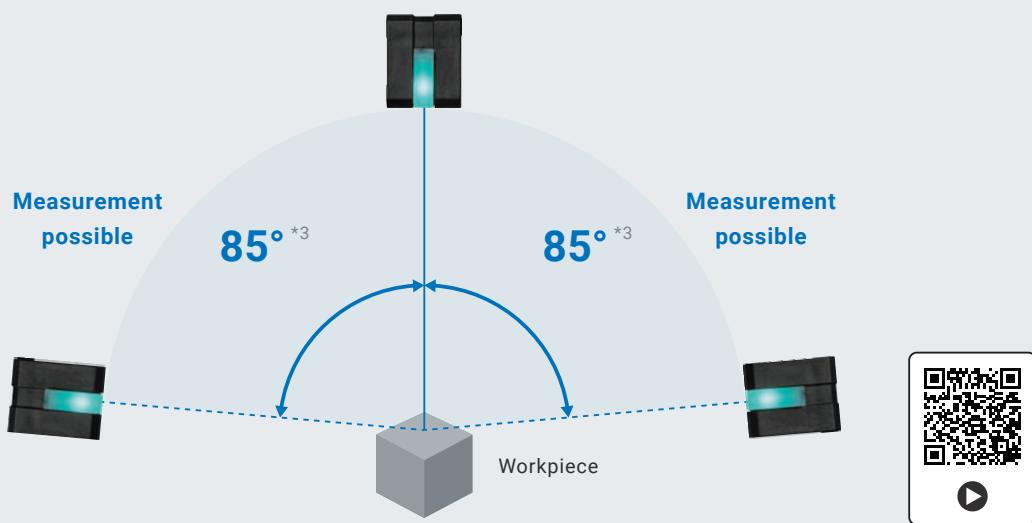

## Different materials can be detected with the same configuration

ZP-L delivers a wide dynamic range<sup>\*1</sup> that delivers stable detection of a wide range of workpieces, from black polished workpieces (such as the painted surface of a car body), which reflect little light, to metal workpieces, which reflect a lot of light.

## Wide angle characteristic enables flexible installation

ZP-L has a wide angle characteristic, powered by its wide dynamic range and OMRON's unique sensing algorithms. It can measure an area of up to approximately 85°<sup>\*3</sup> allowing for flexible installation. For example, in cases where sensors cannot be installed directly above the target workpiece, ZP-L can be positioned diagonally and still deliver reliable measurement.

## Reliable best-of-class<sup>\*4</sup> detection performance

When selecting or replacing your laser displacement sensors, be sure to check the following three performance attributes.

Static resolution  
**0.5 µm**

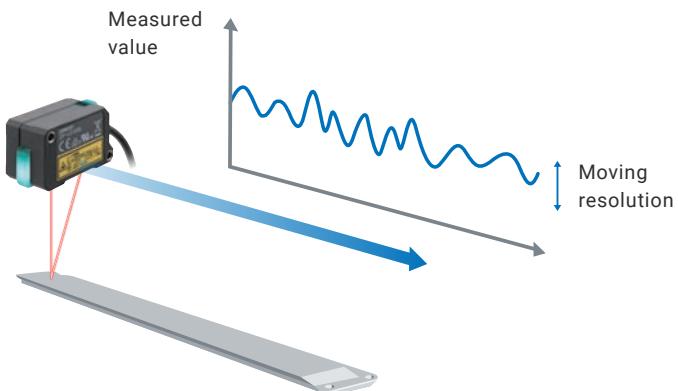

Linearity  
**0.025% F.S.**

Temperature characteristics  
**0.01% F.S./°C**

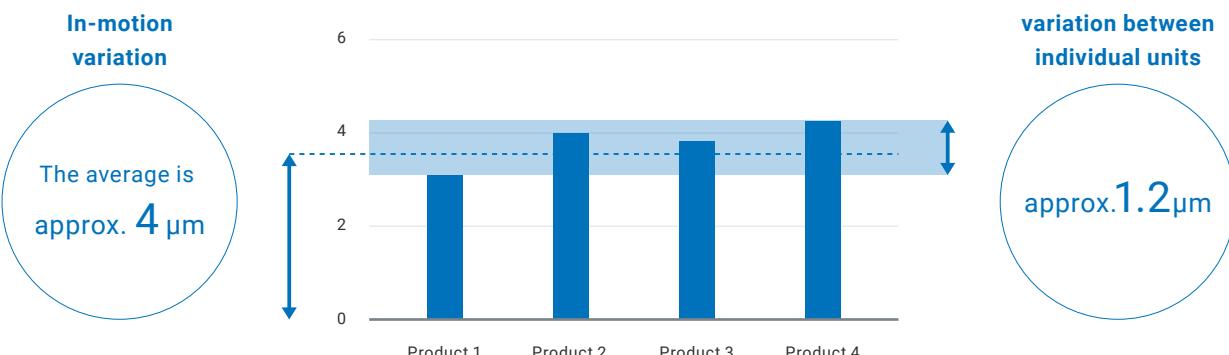

Note: Representative ZP-L Series performance values

## Reduces two types of variations: those in measurements made in motion and between individual sensor units

When measuring moving workpieces, laser displacement sensors, by their nature, are impacted by workpiece surface conditions, and variations in measurement values may exceed the resolution set forth in their specifications.

Measurement value variations in measurements made in motion  
( moving resolution ) [ µm ]

\*1. "Dynamic range" is a metric that indicates the range of detectable workpiece types, expressed as the ratio between the reflectance of the most reflective detectable workpiece and that of the least reflective detectable workpiece.

\*2. Compared with OMRON's ZX2 Series.

\*3. Representative example for workpieces with metal surfaces. Shape or material of measured object may impact measurement.  
Please check in advance using actual devices.

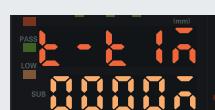

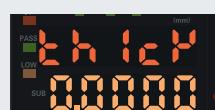

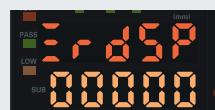

\*4. Best-performing in class of laser displacement sensors for detecting around 10 µm to 1 mm (according to OMRON investigation in November 2024).

# User interface requiring no manuals for easy understanding

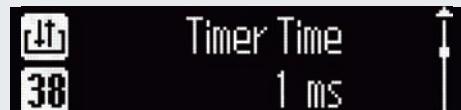

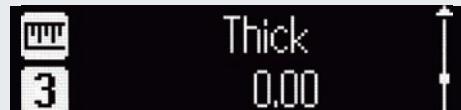

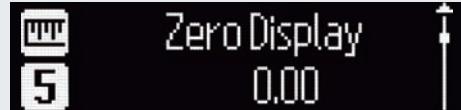

## Easy-to-understand menu display

Amplifier units for previous laser displacement sensors used segment displays, which made it difficult for workers to know which item they were configuring without referencing their manuals. ZP-L amplifier units are equipped with OLED displays, which are capable of much richer presentation, allowing for easy-to-understand menu displays that save you the time of searching through your manuals for the right page.

Previous displays

ZP-L display

## Required action as well as error displayed in multiple languages

PATENT PENDING \*1

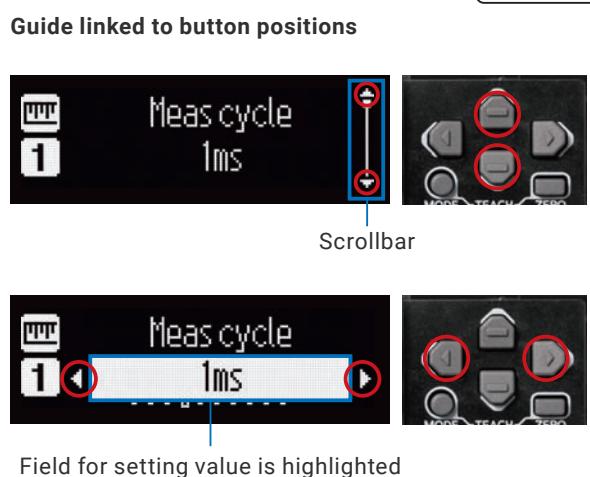

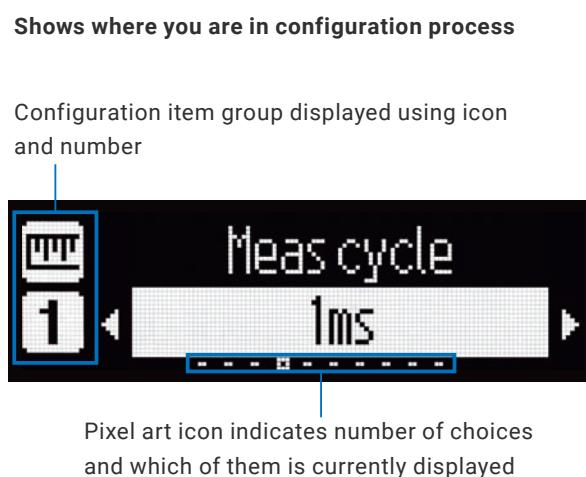

ZP-L's display supports four languages, so that on-site workers at local factories can understand its configuration. Error displays have been carefully designed as well. The details of the error and the required action can be shown in different languages on the OLED display, allowing on-site first responders to take smooth action and enabling faster recovery.

	Error details	Required action
English	 Error-05 Head com err	 Check head connection
Chinese	 Error-05 传感头通信异常	 检查头部连接
Korean	 Error-05 헤드통신오류	 헤드 연결 확인
Japanese	 Error-05 ヘッド通信異常	 ヘッド接続を確認して下さい

## Intuitive screen design

PATENTED \*1

The configuration screen is ingeniously designed to prevent users from losing track of where they are in their configuration process. Its layout, which works in coordination with button operation, allows for intuitive operation.

\*1. "Patent pending" and "Patented" refer to patent status in Japan (as of November 2024).

# Support software allowing quick test without loggers

## Operation/maintenance

### Sensor conditions can be checked without stopping equipment

With ZP-L, you can check sensor conditions without impacting the equipment's control operations, just by connecting the PC with the support software Wave Inspire ZP installed to the switching hub. There's no need for data loggers, or to program PLCs for operation checks. The support software Wave Inspire ZP can be downloaded for free. Please refer to the system configuration page in the data sheet for details.

#### Support software Wave Inspire ZP

Changes in configuration can be found and reversed quickly

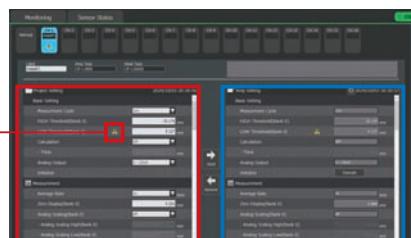

PATENT PENDING

No need to set the same configuration over and over again

Sensor configurations can be saved to the support software Wave Inspire ZP, which means you can compare your current sensor configuration with that at the time of setup. It also means that you can quickly find any changes that may have been made to your usual sensor configuration. Once you find the changes, you can reverse them with just a single click.

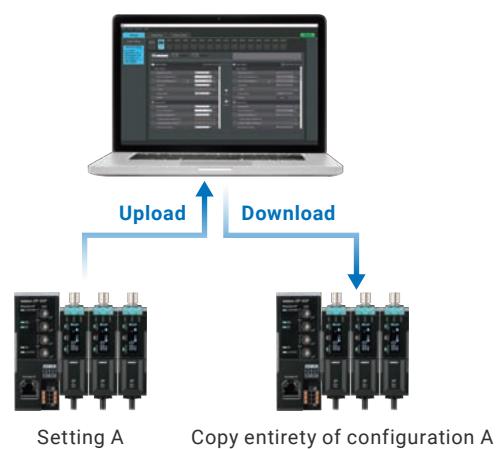

Changed setting

Sensor configuration saved in support software

Actual sensor configuration

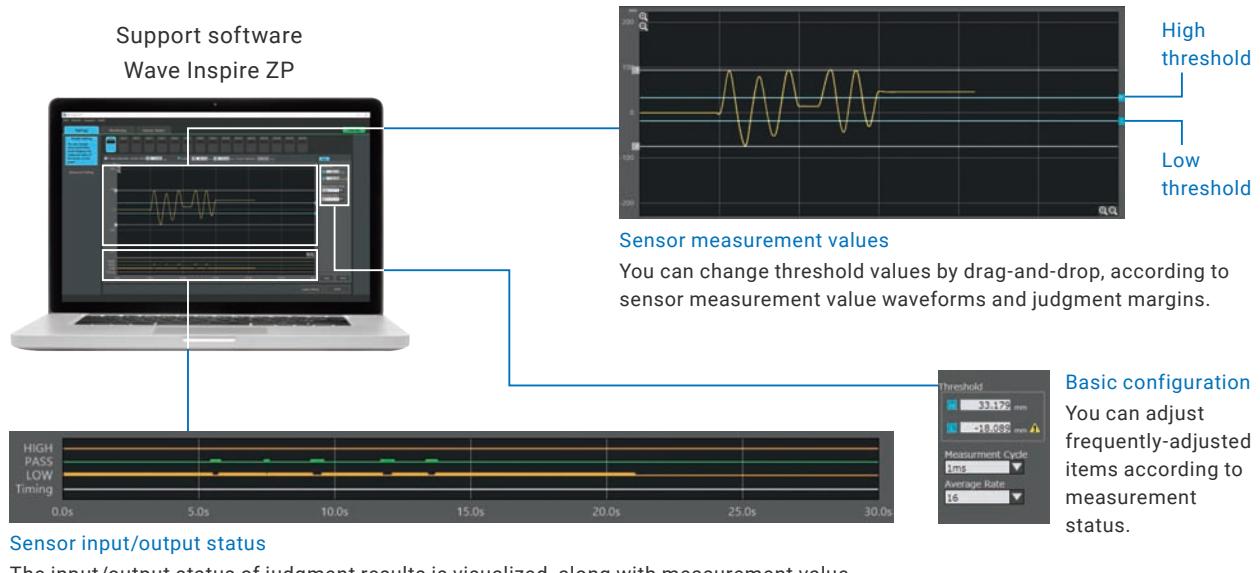

You can copy the saved settings when replacing or expanding the amplifier unit at once.

## Testing upon setup

# Measurement data can be visualized in just three minutes

Previously, testing upon setup required that measurement values be monitored using upper-level systems such as PLCs or tools such as data loggers, which took time and effort. With ZP-L, you can complete configuration and monitoring in just three minutes after connecting the sensor to the support software Wave Inspire ZP.

### Sensor input/output status

The input/output status of judgment results is visualized, along with measurement value waveforms, allowing you to literally see whether the results are as expected.

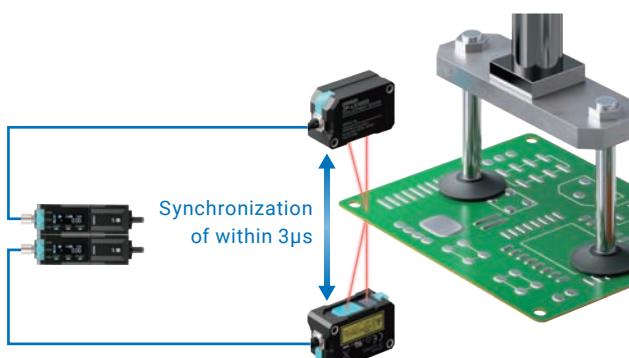

# Retrieved data is high-quality as well

Data for testing must be of high simultaneity and retrieved in high speed. ZP-L is equipped with a system that is meticulously designed to deliver high sensing simultaneity (3  $\mu$ s) and high-speed (1 ms) data retrieval.

## Simultaneity

**PATENT PENDING** <sup>\*2</sup>

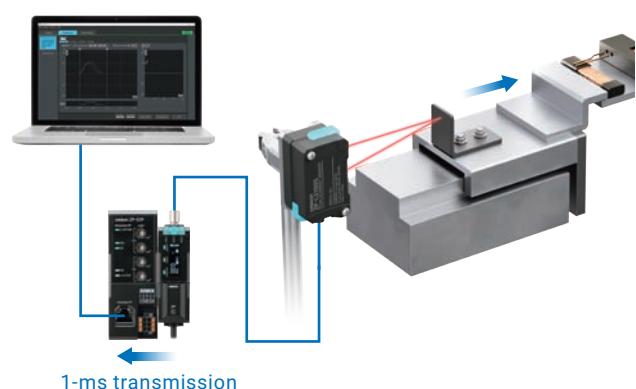

ZP-L delivers high-quality data verification, even in cases using multiple sensor units. The timing of data measurement for all sensors connected to amplifiers is synchronized to within 3  $\mu$ s, allowing you to conduct verifications without worrying about timing deviations.

## Speed

**PATENT PENDING** <sup>\*2</sup>

ZP-L can also be used to verify high-velocity events. It can retrieve measurement values in 1-ms intervals, which can then be used to draw charts on your PC screen that closely depict actual equipment behavior.

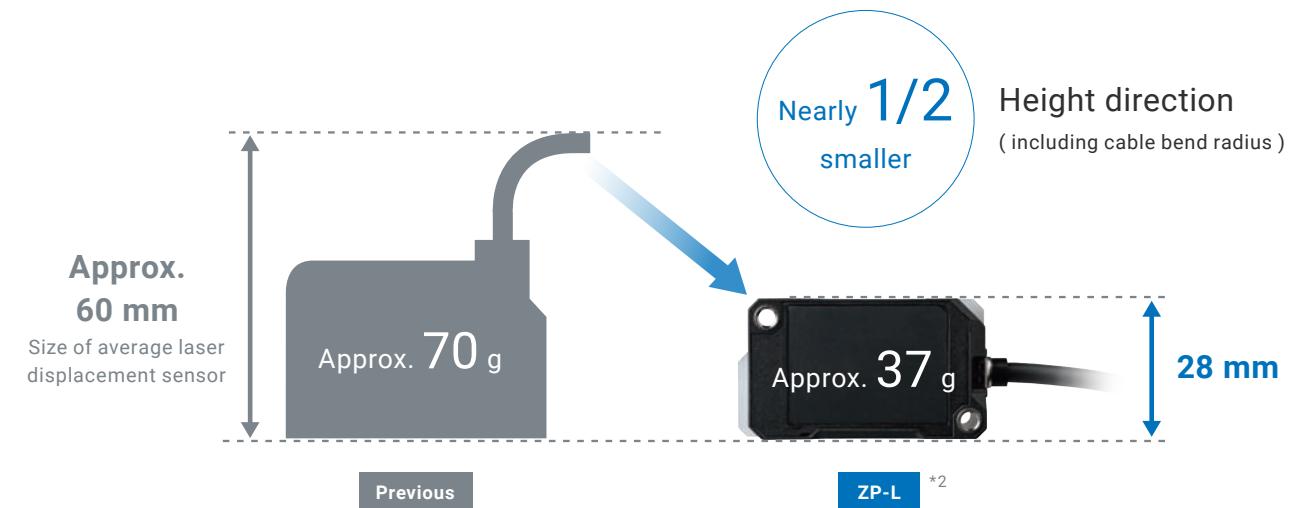

\*1. Communication unit ZP-EIP required for connection with PC.

\*2. "Patent pending" and "Patented" refer to patent status in Japan (as of November 2024).

# Carefully designed for on-site usability

## Smallest and lightest in its class,<sup>\*1</sup> and therefore easy to embed

Equipment is getting smaller, which means less space inside the equipment for sensor installation. With ZP-L, we were able to achieve our ambition to create a product that delivers both advanced accuracy and compact size, especially in the height direction, where space tends to be more restricted. The sensor head is also lighter, allowing for easier equipment rigidity design.

### Indicator lights easily visible from all directions

Large indicator lights in two locations (at top and back of sensor head) easily visible from all directions.

### Find Me function for identifying sensor paired with amplifier unit

When an amplifier unit is switched to configuration mode, the indicator lights on the sensor head connected to it blink in blue, making it easy to find, without the tedious task of tracing the cable.

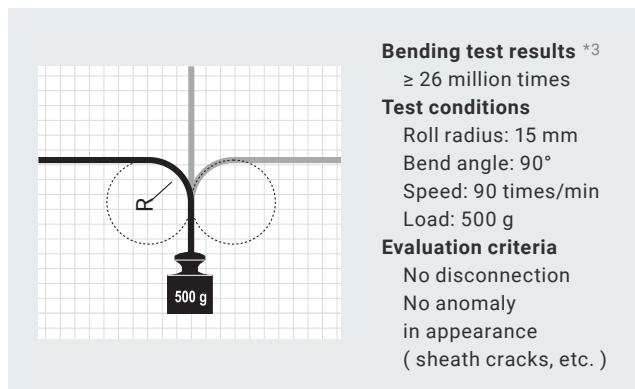

## Flexible mounting brackets that can be adjusted in three directions

Previous products required the effort-consuming task of designing and preparing brackets for mounting your sensors, and making fine optical axis adjustments when installing them. The ZP-L Series offers mounting brackets that allow you to easily make optical axis adjustments in three directions: height, horizontal, and angular.

## Robot cables for moving parts

We offer highly bend-resistant extension robot cables for customers who need cables with high bend resistance. Our robot cables are perfect for moving parts of common machines such as cableveyors and loaders.

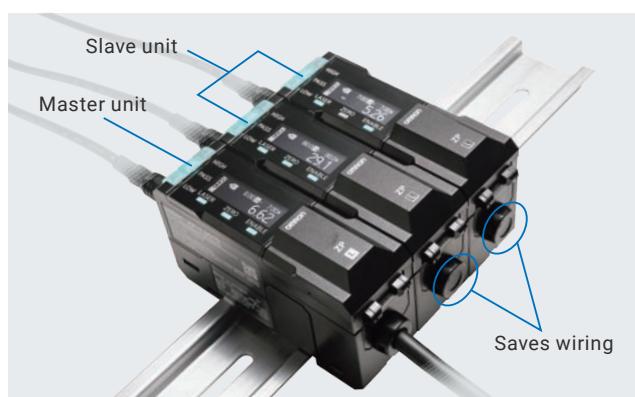

## Third-party certified for compliance with laser standards

ZP-L sensor heads have CB certification, a standard for lasers, which means that when you use them in your equipment, it doesn't need to be applied for laser certification.

## Slave amplifier units that reduce wiring

We offer slave amplifier units that help you reduce wiring when using multiple sensors. Power can be supplied from the master unit, which means slave units don't need to be wired for power. You can also save cable termination effort by using slave units without cables for units that don't output judgment.

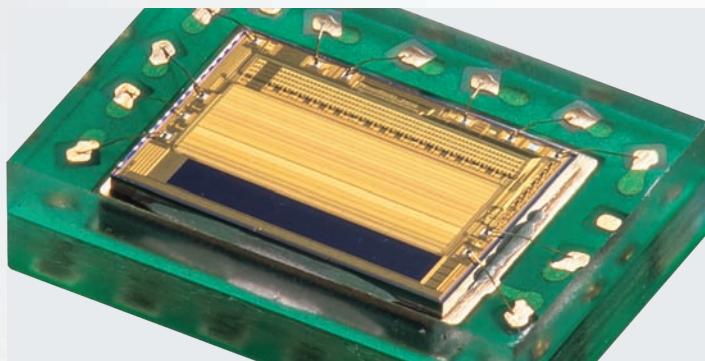

\*1. Best-performing in class of laser displacement sensors for detecting around 10 µm to 1 mm (according to OMRON investigation in November 2024).

\*2. In case of ZP-LS025/-LS050/-LS100.

\*3. Test results are from tests conducted by OMRON and should be used only as reference information, not as guaranteed values when using products in actual customer settings and conditions thereof.

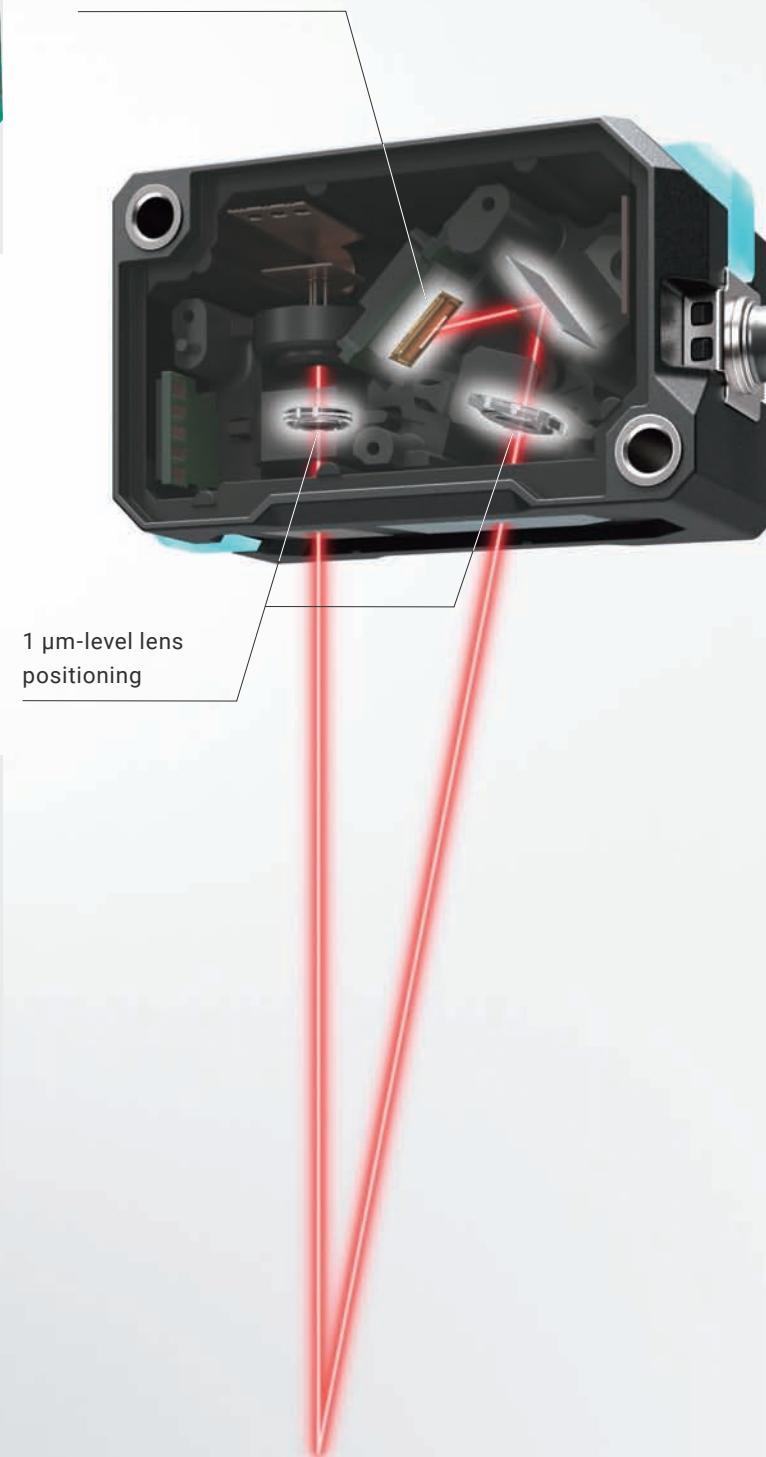

# 4 technologies powering ZP-L's best-in-class performance<sup>\*1</sup>

Custom CMOS image sensor designed to deliver maximum sensing performance

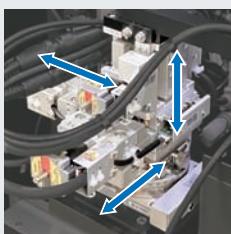

In developing ZP-L, OMRON took a deep dive into the internal structure and production process of CMOS image sensors to custom-develop high-speed, high-sensitivity, low-noise CMOS image sensors that maximize performance.

Custom CMOS image sensor

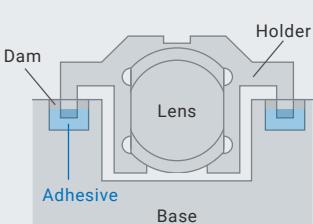

Unique manufacturing methods that reduce variations between individual units PATENT PENDING<sup>\*2</sup>

Automatic three-axis adjustment mechanism

Technology for accurate adjustment

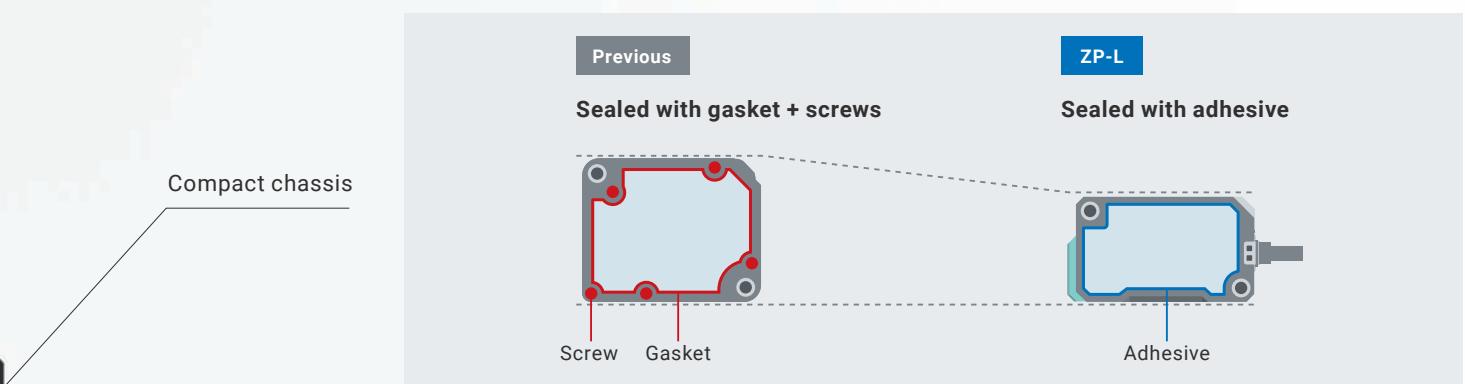

Flexible fixing mechanism using dam structure

Technology for accurate component fixing

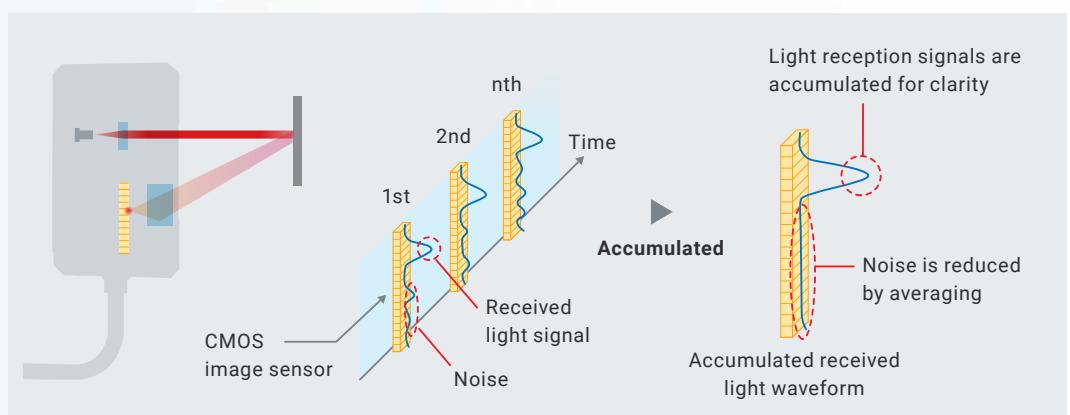

OMRON successfully developed and applied unique technologies that deliver micrometer-level automatic lens adjustment and nanometer-level fixing in the ZP-L production process. Together, these technologies minimize variations in adjustment and assembly, thereby reducing variations in performance between individual sensor units.

## Unique adhesive sealing technology that enables downsizing

As a general rule, improving sensor accuracy means using larger optical components, such as lenses and CMOS image sensors. This creates a trade-off between improving accuracy and reducing size. To resolve this dilemma, ZP-L uses a sealing technology using adhesives, which, compared to more conventional sealing methods using screws and gaskets, allows for more efficient use of chassis space. It is thanks to this technology that ZP-L is able to deliver high accuracy while having the smallest chassis in its class.

## Sensing algorithm for stable sensing, of different materials and in tilted positions

ZP-L delivers significantly higher sensitivity compared to previous products, through its unique process of integrating received light waveforms. This process amplifies the slightest light, allowing for stable detection even when the head is installed in a tilted position.

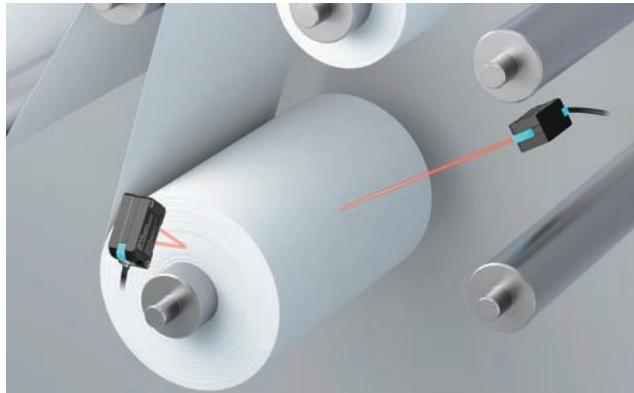

\*1. Best-performing in class of laser displacement sensors for detecting around 10 µm to 1 mm (according to OMRON investigation in November 2024).

\*2. "Patent pending" and "Patented" refer to patent status in Japan (as of November 2024).

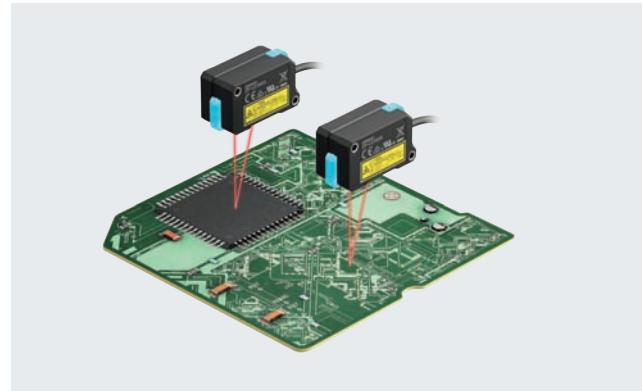

ZP-L can be used to determine positions and to measure heights/thicknesses of around 10 µm to 1 mm

## Height/Thickness

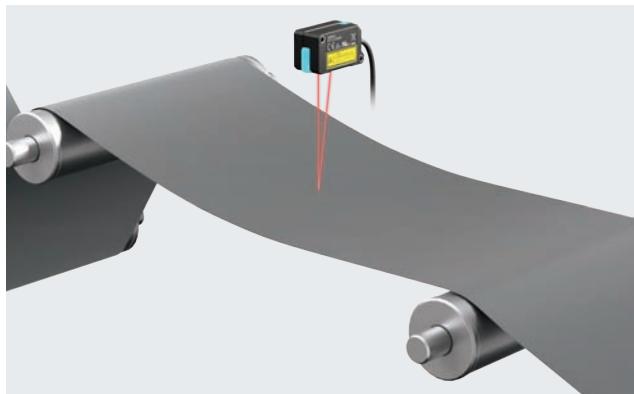

Detecting material remaining on roll

Measuring component heights

Monitoring trends in warp amount

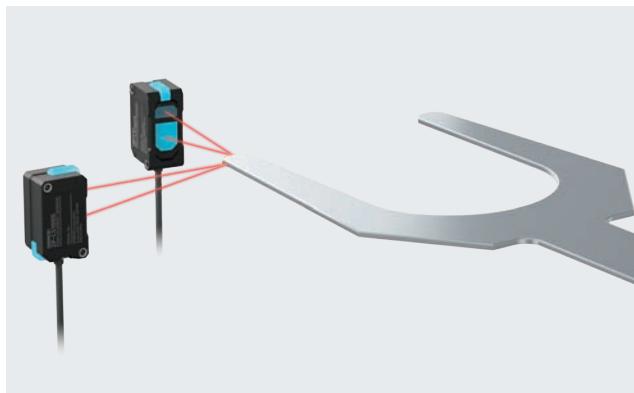

Determining whether part is present

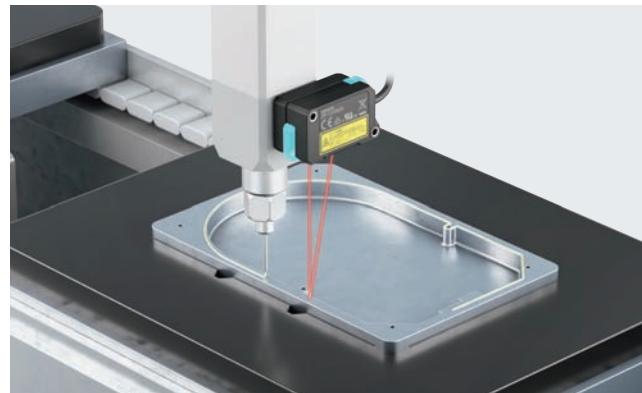

## Positioning/Control

Robot hand positioning

Nozzle height control

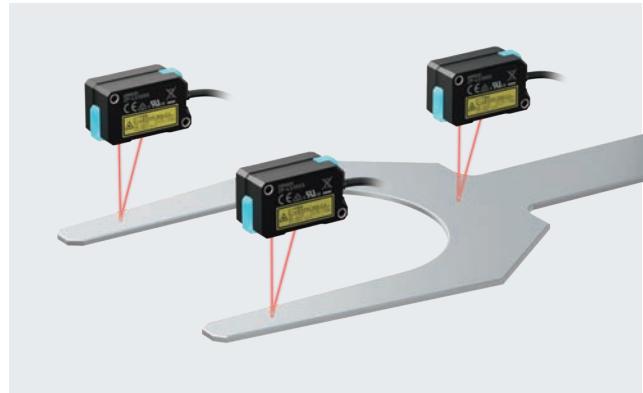

## Shape/Curves

Shape inspection of metal part

Flatness measurement/inspection

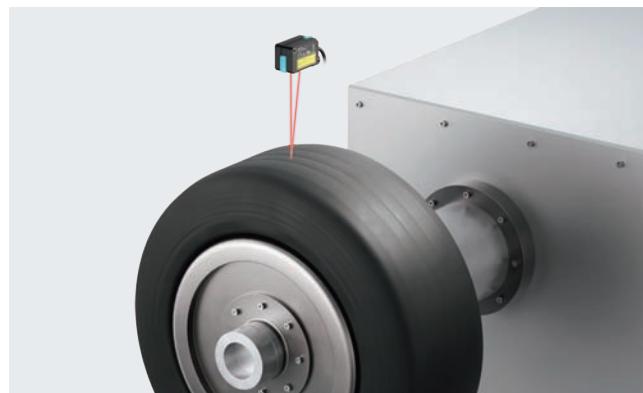

## Stroke/Deflection

Press stroke management

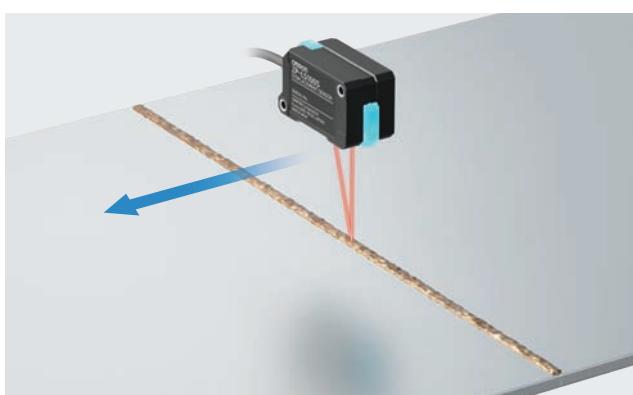

Tire eccentricity inspection

## Joints/Counting

Detecting joints in welding

Counting number of trays

# Laser Displacement Sensor

## ZP-L

### Premium detection stability and optimal usability for Laser Displacement Sensors

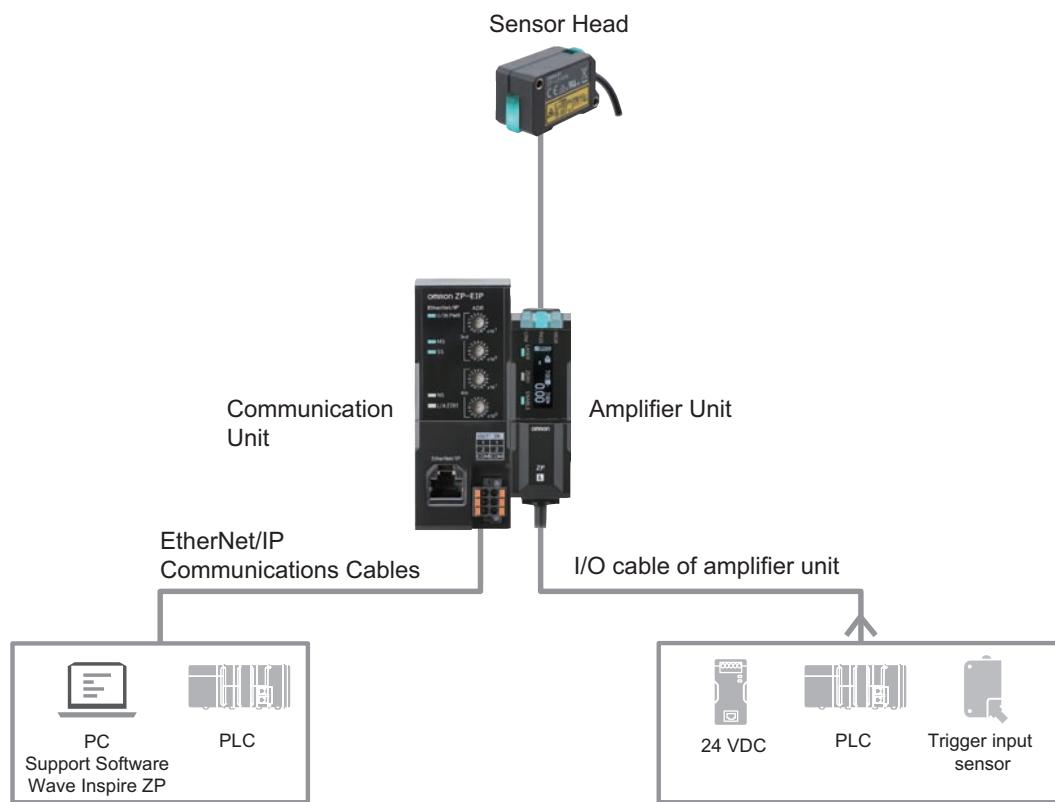

- Sensing performance delivering stable detection with initial configuration left intact
- User interface requiring no manuals for easy understanding
- Support software allowing quick test without loggers

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

## System configuration

### Basic configuration

Product	Description
Sensor Head	We offer an extensive lineup from which you can select your product based on measurement distance, beam shape, and resolution.
Amplifier Unit	One amplifier unit is required for each sensor head.
Communication Unit	Required for communication with PC/PLC.
EtherNet/IP Communications Cables	Required for connection with PC/PLC.
Support Software Wave Inspire ZP	Download free from below URL. <a href="https://www.ia.omron.com/zp_tool">https://www.ia.omron.com/zp_tool</a>

## Configuration with multiple units connected

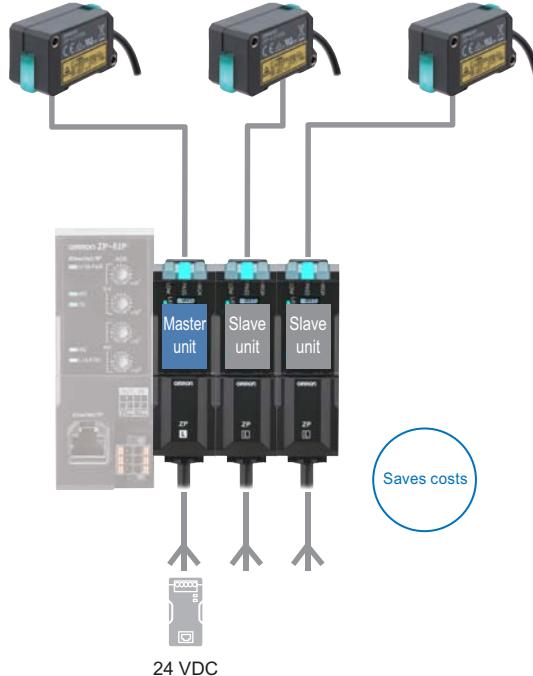

We offer two lines of amplifier unit products: master units and slave units. When using several sensor units, use them with slave units to save costs and wiring. Up to 16 amplifier units can be connected together (one master unit, 15 slave units).

When having judgment output from each amplifier unit

1 master unit,

N slave units (models with input/output:

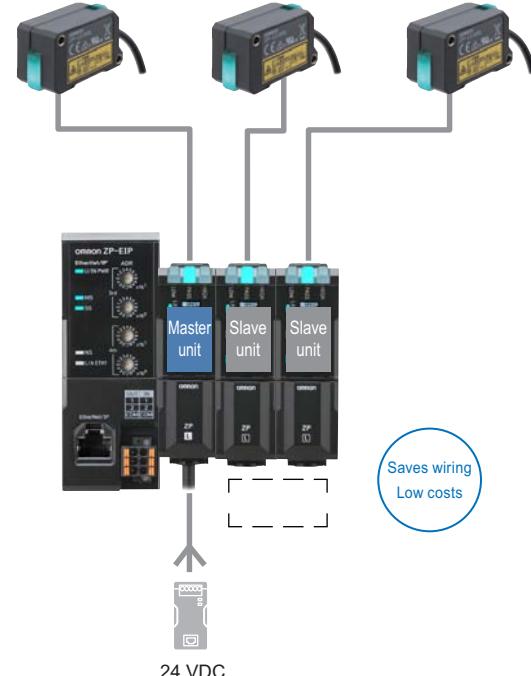

ZP-L3500/-L3510/-L3550/-L3560)

When retrieving measurement values using communication unit

1 master unit,

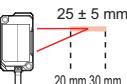

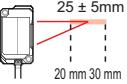

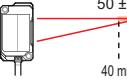

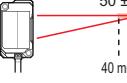

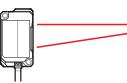

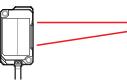

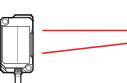

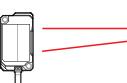

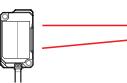

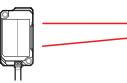

N slave units (model without input/output: ZP-L3590)

Product	Description
Amplifier unit master unit	First amplifier unit must be master unit. Power supply is connected to master unit only.
Amplifier unit slave unit	Up to 15 units can be connected. There are three types with different combinations of analog output, judgment output, and external input.
Communication Unit	Use as needed.

			5 m	XS3W-M424-405-PR
			10 m	XS3W-M424-410-PR
			20 m	XS3W-M424-420-PR

**Note:** You cannot use multiple extension cables connected together.

**<Key points in selecting your extension cable>**

- The pre-wired cable of the sensor head is a standard cable. In cases where cable bending is necessary, connect an extension robot cable, and bend the extension cable. We recommend you use a 0.2-m cable for your sensor head.
- Using the L-shaped cable connector for amplifier unit connection allows you to secure space around the area of connection.

## Recommended EtherNet/IP Communications Cables

For EtherNet/IP, required specification for the communications cables varies depending on the baud rate. For 100BASE-TX/10BASE-T, use a straight or cross STP (shielded twisted-pair) cable of category 5 or higher.

### Cable with Connectors

Wavelength	660 nm			
Laser class	ZP-LS□L, ZP-LS□S: Class 2 (JIS/IEC/EN/FDA/GB) ZP-LS□LC, ZP-LS□SC: Class 1 (JIS/IEC/EN/FDA/GB)			
Laser power	ZP-LS□L, ZP-LS□S: 1 mW max. ZP-LS□LC, ZP-LS□SC: 0.376 mW max.			
Spot diameter *1	Approx. 340 × 2,800 μm	Approx. 310 μm dia.	Approx. 670 × 5,800 μm	Approx. 600 μm dia.
Linearity *2	±0.03% F.S. (±90 μm)	±0.04% F.S. (±120 μm)	±0.06% F.S. (±480 μm)	±0.075% F.S. (±600 μm)
	when used at 150 to 300 mm		when used at 200 to 600 mm	
Total area	±0.1% F.S. (±300 μm)	±0.125% F.S. (±375 μm)	±0.15% F.S. (±1,200 μm)	±0.2% F.S. (±1,600 μm)
	when used at 150 to 450 mm		when used at 200 to 1000 mm	
Resolution (Repeatability) *3	4 μm		14 μm	
Temperature characteristics *4	0.01% F.S./°C		0.02% F.S./°C	
Indicators	2 indicators (identified by color) HIGH (orange)/PASS (green)/LOW (orange), Out of range (white), Error (red), SETTING mode (blue)			
Ambient illuminance	Illuminance of light-receiving surface, Incandescent lamp: 5,000 lx max.			
Ambient temperature range	Operating: -10 to 50°C, Storage: -15 to 70°C (with no icing or condensation)			
Ambient humidity range	Operating and storage: 35% to 85% RH each (with no condensation)			
Dielectric strength	1,000 VAC 50/60 Hz for 1 min.			
Insulation resistance	20 MΩ min. (at 500 VDC)			
Vibration resistance	10 to 500 Hz, double amplitude 1.5 mm, 120 min. each in X, Y and Z directions			
Shock resistance	300 m/s <sup>2</sup> , 3 times each in 6 directions along X, Y, and Z axes			
Degree of protection	IP67 (IEC60529)			
Connection method *5	Pre-wired Connector type (Standard cable length: 2 m/0.2 m)			
Material	Case and cover: Polybutylene terephthalate, Optical window: Glass, Threaded portion: SUS304, Cable: PVC			
Weight (Main unit only)	Approx. 110 g (Cable length: 2 m), Approx. 70 g (Cable length: 0.2 m)			
Accessories	Instruction manual, compliance sheet, FDA certification label, fixing screws (M3 × 35 mm. 2 screws), laser warning label (ZP-LS□L and ZP-LS□S models only)			

\*1. This is the value (actual value) at the standard distance, which is defined as  $1/e^2$  (13.5%) of the central light intensity.

\*2. This shows the error of displacement output relative to the ideal line when OMRON's standard target (white diffuse object) is measured.

Linearity and measured values may vary depending on the target object.

F.S. refers to the entire measuring range (70 mm for ZP-LS100L).

\*3. This shows the width of the variation of measured values when OMRON's standard target (white diffuse object) is measured at a reference distance with a measurement cycle of 1 ms and an average rate of 128 times.

\*4. This is the value (typical value) measured at the reference distance, with the Sensor Head and OMRON's standard object (white diffuse object) fixed with an aluminum jig between them.

\*5. This product is powered by the Laser Displacement Sensor Amplifier Unit (ZP-L3□□□).

Master/Slave unit	Slave Unit								
I/O type	NPN		PNP		No I/O				
Analog output *1	Current output	4 to 20 mA Maximum load resistance: 350 Ω	No analog output	4 to 20 mA Maximum load resistance: 350 Ω	No analog output				
	Voltage output	±5 V, 1 to 5 V, 0 to 5 V Output impedance: 100 Ω		±5 V, 1 to 5 V, 0 to 5 V Output impedance: 100 Ω					
Control output *2	HIGH/PASS/LOW/ Error output Open collector output: 30 VDC, 50 mA max., Residual voltage: 2 V max. N.O./N.C. switchable				No control output				
External input	Zero reset, Laser OFF, Timing, Reset, BANK				No external input				
	When ON: 0 V short-circuit or 1.2 V max. When OFF: Open (Leakage current: 0.1 mA max.)		When ON: Power supply voltage short-circuit or within -1.2 V of power supply voltage When OFF: Open (Leakage current: 0.1 mA max.)						
Measurement cycle	125 µs/250 µs/500 µs/1 ms/2 ms/4 ms/20 ms/50 ms/100 ms switchable								
Maximum number of connected units	16 (15 slave units can be connected per master unit)								
Display	OLED display Judgment indicators: HIGH (orange/red), PASS (green/red), LOW (orange/red) Status indicators: LASER (Green), ZERO (Green), ENABLE (Green)								
Power supply voltage *3	Supplied by master unit								
Power consumption *4	2,300 mW max.	2,000 mW max.	2,300 mW max.	2,000 mW max.					
Ambient temperature range	Operating: -10 to 50°C (standalone or multi-unit connection) *6 Storage: -15 to 70°C (with no icing or condensation)								
Ambient humidity range	Operating and storage: 35% to 85% RH each (with no condensation)								
Dielectric strength	1,000 VAC 50/60 Hz for 1 min.								
Insulation resistance	20 MΩ min. (at 500 VDC)								
Vibration resistance	10 to 150 Hz, double amplitude 0.7 mm, 80 minutes each in X, Y, and Z directions								
Shock resistance	300 m/s <sup>2</sup> , 3 times each in 6 directions along X, Y, and Z axes								
Degree of protection *5	IP40 (IEC60529)								
Connection method	Cable pull-out type (Standard cable length: 2 m)				None				
Material	Main unit case, operating section cover: Polycarbonate Cable: PVC				Main unit case, operating section cover: Polycarbonate				
Weight (Main unit only)	Approx. 150 g	Approx. 140 g	Approx. 150 g	Approx. 140 g	Approx. 70 g				
Accessories	Instruction manual, compliance sheet								

\*1. Select ±5 V, 1 to 5 V, 0 to 5 V, or 4 to 20 mA to use this.

\*2. When six or more Amplifier Units are added including the master unit, use a load current of 20 mA/ch or less.

\*3. Use a Class 2 power supply to supply power to this product. When six or more Amplifier Units are added including the master unit, use a power supply voltage of 20 to 30 V, including 10% ripple (p-p).

\*4. This includes the power consumption of the Sensor Head. It does not include the load current of each output.

\*5. This indicates the degree of protection when connected to a master unit.

\*6. If the total number of connected amplifier units, including the master unit, is three or more and includes a ZP-L3500/-L3550, use the unit in an ambient temperature range (during operation) of -10 to 45°C.

## Main functions

Function name	Description
<b>Measurement cycle</b>	Set as needed according to workpiece reflectance, tilt, etc. You can also use the auto-configuration feature to automatically set the optimal measurement cycle for the workpiece being measured.
<b>Average rate</b>	Set as needed according to measurement value stability.
<b>Calculation</b>	Enables calculation between multiple sensor heads and amplifier units. Provides addition and subtraction features, which you can use to measure level difference, thickness, etc. Calculation is performed by the master unit.
<b>Analog output</b>	Allows you to change analog output to voltage output and current output.
<b>Analog scaling</b>	Function for adjusting analog output against measurement results. Use, for example, when you want to present slight changes in displacement as large changes in analog output.
<b>Measurement scaling</b>	Function for applying correction to measurement results. Use when there is a difference between the expected result and measurement result, or when you want to apply a certain offset value.
<b>Detection select</b>	Allows you to select which surface to use for your measurement result, in cases where multiple measurement surfaces exist within the range of measurement. Use when measuring through glass, or detecting front/back surfaces of thin film.
<b>Differential calculation</b>	With this function, the measurement result is the difference between the current displacement amount and that of a given time earlier. Use when counting thin, board-like workpieces or when exclusively detecting sudden changes.
<b>Hold function</b>	With this function, the detection result is the feature value for the specified period. You can select which feature value to extract, e.g., the peak value (peak hold), the bottom value (bottom hold), the range of change (peak-to-peak hold), and so forth.
<b>Timer mode</b>	Allows you to delay upon changes in judgment output, or turn PASS output ON for a given period. Use when the judgment output changes so rapidly that upper-level devices cannot receive the signals.
<b>Synchronization</b>	Allows you to specify sensor head measurement timing. By staggering measurement timing, you can prevent mutual interference between sensors.
<b>BANK change</b>	Allows you to save/load sensor settings to the BANK. This function lets you change multiple settings (e.g., measurement cycles and threshold values) at once, which is useful in product changeovers, etc.

**Communication Unit****ZP-EIP****General Specifications**

Item	Specification
	ZP-EIP
<b>Sensor that can be connected</b>	ZP-series Amplifier Unit

\*1. This indicates the degree of protection when connected to an Amplifier Unit.

## EtherNet/IP Communications Specifications

Item	Specification	
	ZP-EIP	
<b>Communications protocols</b>	EtherNet/IP protocol	<ul style="list-style-type: none"> <li>Implicit messages (Class1)</li> <li>Explicit messages (Class 3, UCMM)</li> </ul>
<b>Modulation</b>	Baseband	
<b>Link speed</b>	10 Mbps or 100 Mbps	
<b>Ethernet physical layer *1</b>	100BASE-TX or 10BASE-T (100BASE-TX is recommended.)	
<b>Ethernet switch</b>	Layer-2 switch	
<b>Transmission media</b>	Category 5 or higher twisted-pair cable (Recommended cable: double-shielded cable with aluminum tape and braiding)	
<b>Transmission distance</b>	100 m or less (Distance between nodes and between hub and node)	
<b>Topology</b>	Star, tree	
<b>Number of connected Units</b>	<ul style="list-style-type: none"> <li>Star No restrictions</li> <li>Tree There is no restrictions in the number of cascade connections when an Ethernet switch is used.</li> </ul>	
<b>EtherNet/IP tag data links</b>	<b>Number of connections *2</b>	1 (Point to Point)
	<b>Packet Interval (RPI)</b>	1 to 10,000 ms
	<b>Allowed communications bandwidth per Unit</b>	4,000 pps
<b>Explicit message</b>	<b>Class 3 (number of connections) *2</b>	5
	<b>UCMM (unconnected) *2</b>	Supported
<b>EtherNet/IP I/O connection size</b>	Input: 276 bytes max. (including input data, status, and unused areas) Output: 24 bytes max. (including output data and unused areas)	
<b>Support functions</b>	<b>Supported services</b>	Tag data link, CIP message communications, automatic clock adjustment (NTP/SNTP client), BOOTP client, DHCP client
	<b>IP address conflict detection</b>	Provided

\*1. If tag data links are used, use 100BASE-TX.

\*2. The maximum number of connections is 10 when tag data links (Class 1), Class 3, and UCMM are used simultaneously.

## ZP-RSA

### General Specifications

Item	Specification
<b>Sensor that can be connected</b>	ZP-series Amplifier Unit
<b>Power supply voltage</b>	10 to 30 VDC, including 10% ripple (p-p) (supplied from Amplifier Unit)
<b>Power consumption</b>	700 mW max. (not including Amplifier Unit)
<b>Indicators</b>	MS (Green/Red), SS (Green/Red), RD (Green), SD (Green)
<b>External input</b>	Request input When ON: 0 V short-circuit or 1.2 V max. When OFF: Open (Leakage current: 0.1 mA max.)
<b>Ambient temperature range</b>	Operating: -10 to 50°C Storage: -15 to 70°C (with no icing or condensation)
<b>Ambient humidity range</b>	Operating and storage: 35% to 85% RH each (with no condensation)
<b>Vibration resistance</b>	10 to 150 Hz, double amplitude 0.7 mm, 80 minutes each in X, Y, and Z directions
<b>Shock resistance</b>	300 m/s <sup>2</sup> , 3 times each in 6 directions along X, Y, and Z axes
<b>Dielectric strength</b>	1,000 VAC, 50/60 Hz for 1 minute
<b>Insulation resistance</b>	20 MΩ min. (at 500 VDC)
<b>Maximum number of connected sensors</b>	16 units max.
<b>Degree of protection *1</b>	IP20 (IEC60529)
<b>Material</b>	Polycarbonate
<b>Weight (Main unit only)</b>	Approx. 75 g
<b>Accessories</b>	Instruction manual, compliance sheet, End Plates (2)

\*1. This indicates the degree of protection when connected to an Amplifier Unit.

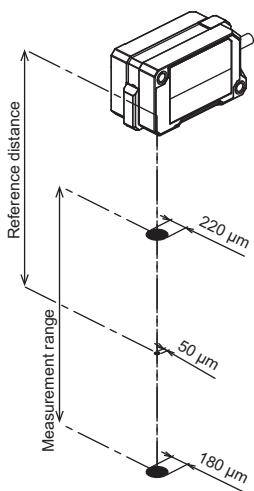

### RS-232C Communications Specifications

Item	Specification
<b>Communications port</b>	RS-232C (terminal block)
<b>Communications method</b>	Full duplex
<b>Synchronization method</b>	Start/stop synchronization
<b>Transmission code</b>	ASCII
<b>Communications speed *1</b>	2,400, 4,800, 9,600 (default) 19,200, 38,400, 57,600, or 115,200 bps
<b>Data bit length *1</b>	7 bits or 8 bits (default)
<b>Parity check *1</b>	None (default), Even, or Odd
<b>Stop bit length</b>	1 bit
<b>Data delimiter</b>	<b>When receiving</b> CR or CR + LF automatically recognized
	<b>When sending</b> CR + LF fixed

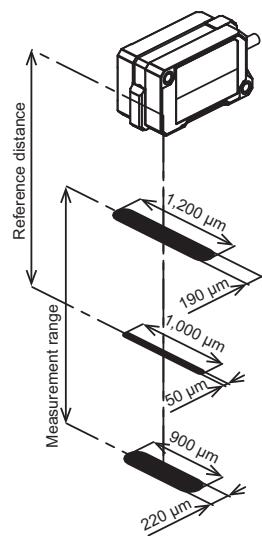

\*1. Use the rotary switches on the front panel of the ZP-RSA to switch between settings. Turn OFF the power supply before changing the switch settings. The settings will be reflected when the power supply is turned ON next time.

## Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

## Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See <http://www.omron.com/global/> or contact your Omron representative for published information.

## Limitation on Liability: Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

## Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

## Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

## Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

## Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

## Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

## Sensors for distance measurement

We offer an array of products for a wide range of detection distances and accuracies.

For detection level difference of around  
**1 mm**

**Photoelectric sensor**  
**E3AS-HL series**

For resolution of  
**0.5 μm**

**Displacement sensor**  
**ZP-L series**

For resolution of  
**0.002 μm**

**Displacement sensor**  
**ZW series**
