

PowerAttendant Standard Edition Windows Upgrade Instructions

This document explains how to upgrade PowerAttendant Standard Edition for Windows (hereinafter referred to as PAS) from an older version to Ver.2.3.0.

If you are installing Ver.2.3.0 for the first time, please refer to the instruction manual and install it.

request

- PAS Ver.2.3.0 uses the ".NET 10.0" provided by Microsoft. Before installing this software, be sure to install ".NET10.0". For instructions on how to install ".NET10.0", please refer to the manual section "2-1-2 Installing .NET10.0."
- Regarding ".NET 6.0," which was used up to PAS Ver.1.1.1, it is not a problem to leave it installed.
- Regarding ".NET 8.0," which was used up to PAS Ver.2.2.0, it is not a problem to leave it installed.

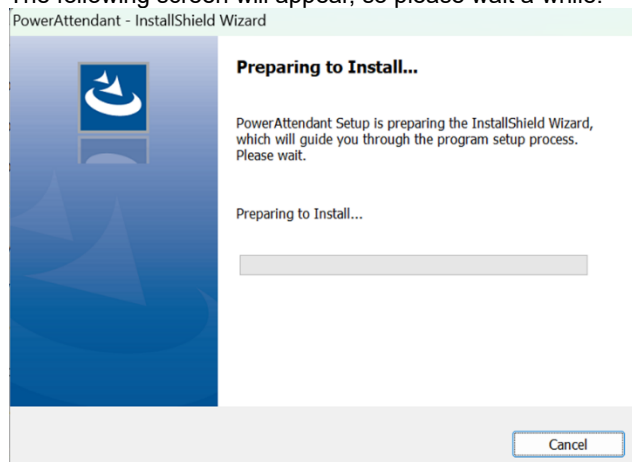

References

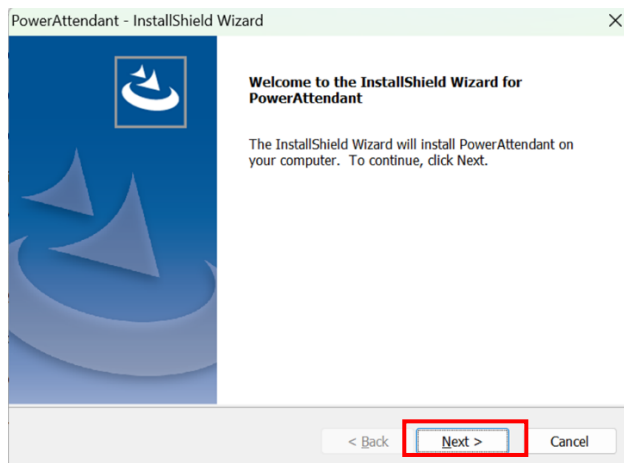

- Even if you upgrade, your settings information will still be saved.
- If you start PAS after the upgrade, it will start according to the pre-upgrade settings information.

1. Double-click the "setup.exe" in Ver.2.3.0. The installation will start.

2. The following screen will appear, so please wait a while.

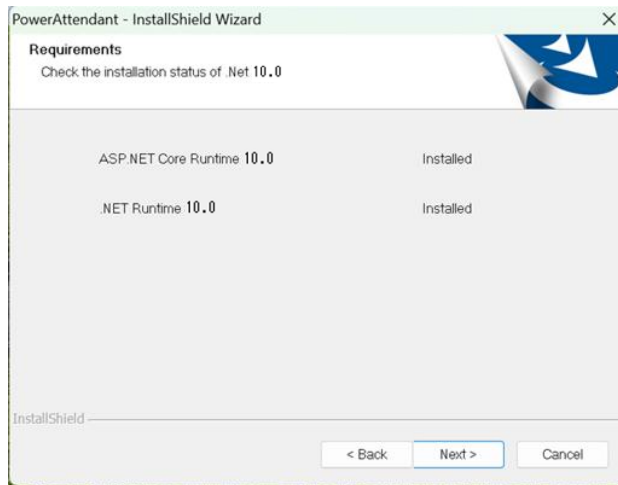

3. The following screen will appear, so click the "Next" button.

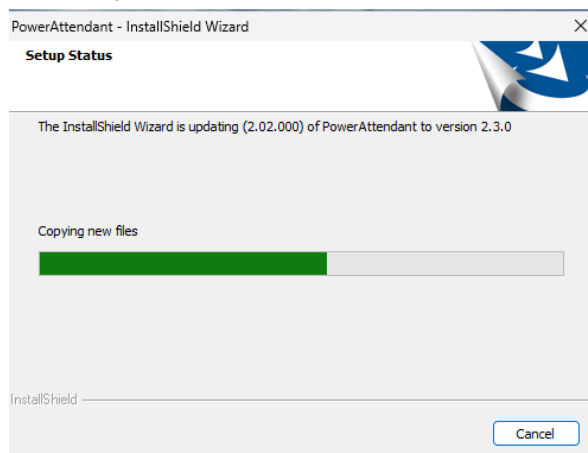

4. The installation status of .NET 10.0 is displayed.

"ASP.NET Core Runtime 10.0" and ".NET Runtime 10.0" is listed as Installed, please click the Next button to continue installing the PAS.

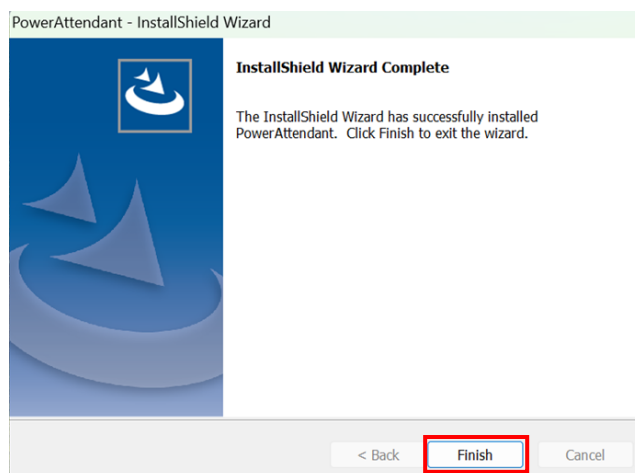

If the software is marked as "not installed", click the "Cancel" button to stop installing the PAS and then install the one marked as "not installed" before installing the PAS again.

5. The following screen will appear, so please wait a moment.

6. Once the upgrade is finished, the following screen will appear, so click the "Finish" button.

7. Starting from version 2.2.0, the specification has been changed so that login is required to display the PAS screen.

After upgrading, when you launch PAS, a login screen will appear, so please enter your login ID and password to log in.
